

_ WALTER RECONDITIONING SERVICE

Reconditioning to manufacturer quality.

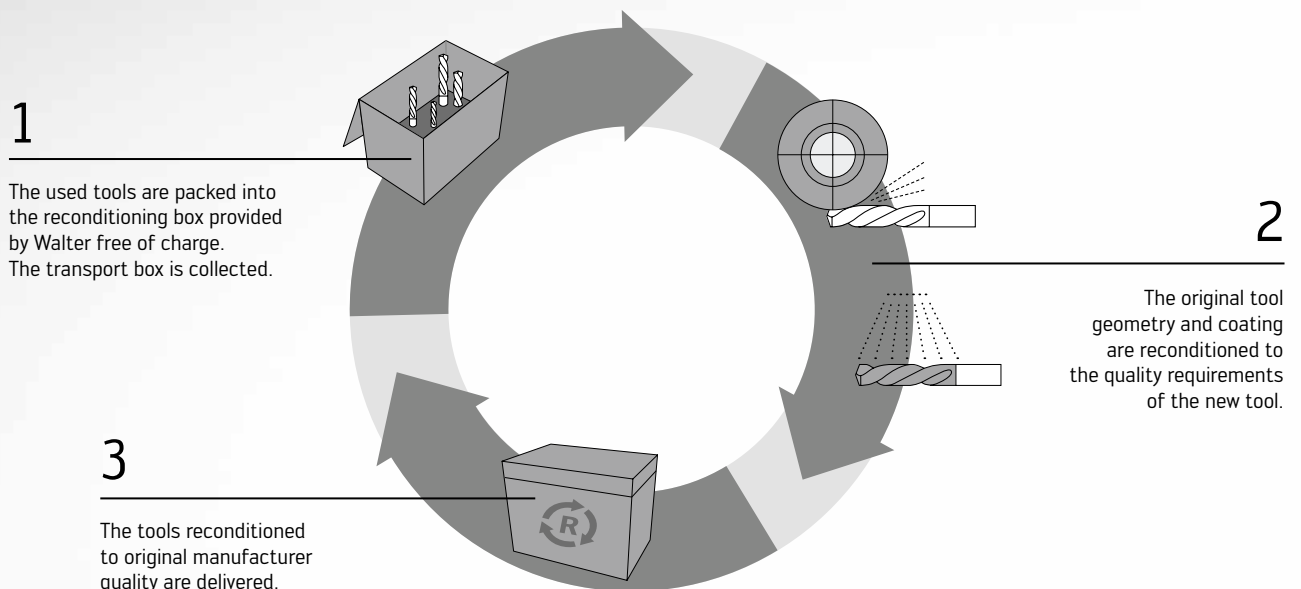

Reconditioning

WALTER RECONDITIONING SERVICE: MANUFACTURER QUALITY PAYS OFF.

The Reconditioning Service for Walter Titex and Walter Prototyp tools makes a significant contribution to reducing your production costs – by allowing you to obtain tools that are as good as new at an attractive price-performance ratio.

Reconditioning cycle:

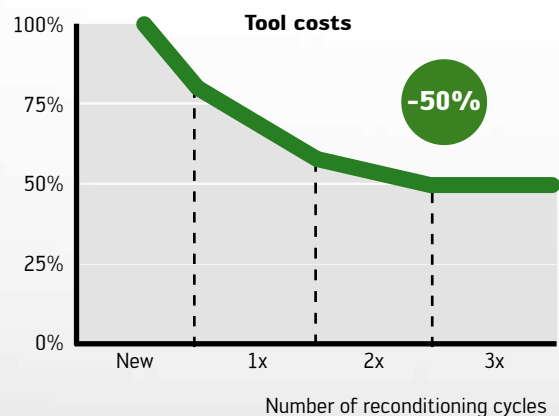

50% LOWER COSTS

The service provided by Walter Multiply – reconditioning tools to manufacturer quality – pays off in more ways than just tool costs:

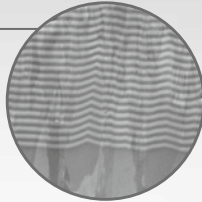

Benefits for you:

- Original, manufacturer-quality geometry and coating
- Reconditioning centres around the world for stable production processes
- Additional services such as measurement protocols, etc. are available

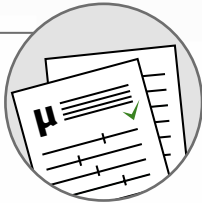

Cutting edge geometries are complex, so Walter uses its wealth of engineering expertise to return them to their original condition.

The **coating** is crucial for tool performance. Walter is the only reconditioning service provider that coats your tool using the original procedure.

The same **tolerances** and **quality features** apply to tool reconditioning as to the production of brand new tools. These standards are maintained using state-of-the-art measuring machines.

OUR INDICATION OF QUALITY

Look out for the "Original Walter Quality" label. It shows you which tools are recommended for reconditioning in your order documentation – and also certifies them afterwards.

100% MANUFACTURER QUALITY

For some time now, achieving optimum performance with solid carbide tools has involved more than just grinding and coating. Special production processes for machining cutting edges mean that additional facilities are required in reconditioning centres. The same applies to the pre- and post-treatment procedures in the coating process. In addition, maximum performance is only achieved in complex geometries by those who meet the highest requirements for production tolerances.

Available for:

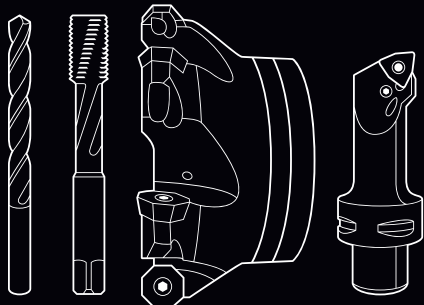

- Solid carbide drills and milling cutters
- Special solid carbide drills and milling cutters
- High-performance solid carbide reaming tools
- Solid carbide thread mills
